

Data Sheet

Whistle Tube

Function

The whistle tube is a component of the simulator projectile ground burst. Its function is to create a whistling sound by creating a high pressure release of gas. A small flame can be observed during the sounds generating process.

Operational Advantages

- High shrill whistle acclimatizes troops during training

Product Specifications

Length	6.5 cm
Diameter	1.6 cm
Gross weight	7.5 g
Whistle Duration	2.5-5 seconds
Packaging	Number per carton 900
	Carton type Cardboard
	Carton dimensions 44.8 cm x 29.8 cm x 22.9 cm
	Carton volume 0.031m ³
	Gross Weight 7 kg
	Inner 225 units per cardboard box
	4 cardboard boxes per outer box
Explosive classification	UN number 0336
	IMCO 1.4G
